SPEED TO LEAD STATS

5 stats wholesalers quote that *don't hold up.*

I traced the numbers in every speed-to-lead deck back to the source. Some weren't there.

and what the real data says →

MYTH 1

1

“78% buy from whoever responds first.”

No title, year, sample or link anywhere. Closest real number: B2B buyers picked the vendor they contacted first about 80% of the time (6sense, 2025).

CAN'T VERIFY

MYTH 2

2

“80% of sales need 5 follow-ups.”

Credited to a “National Sales Executive Association”. VentureBeat found it doesn't exist.

CAN'T VERIFY

MYTH 3

3

“The MIT study: 100x more likely to close.”

The 100× was the odds of **contacting** the lead, not closing. And it was InsideSales data, not an MIT paper.

CAN'T VERIFY

MYTH 4

“85% of callers won't call back.”

No original survey found. What is measured: only 2% of unanswered callers left a voicemail (Invoca, 2021).

CAN'T VERIFY

MYTH 5

5

“Investors buy 1 in 3 homes.”

Out of date. 26.7% in Q2 2026 per BatchData, 19% in Q1 2026 per Redfin. Different methods, so quote one with its source.

CAN'T VERIFY

The real ones are enough.

7× more likely to qualify a lead contacted within an hour (HBR, 2011)

93% of converted leads reached by call attempt 6 (Velocify, 2012)

2% of unanswered callers leave a voicemail (Invoca, 2021)

ALL 62, WITH SOURCES

Which one have you *been quoting?*
