Five numbers to see *before the week starts*

For teams that buy houses and pay for their own seller marketing. You know what these numbers mean for your business, so this sheet sticks to the Salesforce side: what each one needs so it's on one dashboard Monday morning, without a spreadsheet.

1 Cost per appointment, by campaign

WHAT IT IS Campaign spend ÷ appointments set from that campaign's leads.

IN SALESFORCE Actual Cost on each campaign, an Appointment Set Date on the lead, and one report grouped by campaign.

2 Contracts per campaign

WHAT IT IS Signed contracts, counted by the campaign the seller first came from.

IN SALESFORCE The campaign copied from lead to deal and locked once the contract is signed, so a repeat seller keeps the first source.

3 Contract to first seller call

WHAT IT IS Hours from "under contract" to the first logged call with the seller.

IN SALESFORCE A Contract Signed Date, a small flow that stamps the first completed call after it, and a list of signed deals with no call yet.

4 Booked vs. kept profit

WHAT IT IS The profit expected when a deal went under contract, next to the profit kept at closing.

IN SALESFORCE Expected profit locked at signing, kept profit entered at closing, and a fall-out reason on every deal that didn't close.

5 Campaign ROI, including the houses you keep

WHAT IT IS (Kept profit + equity in houses you kept − campaign spend) ÷ campaign spend.

IN SALESFORCE A "kept" flag and an equity value on the deal (after-repair value minus all-in cost), counted in each campaign's ROI.

Which of these can you pull today?

1 · Cost / appt	2 · Contracts	3 · Seller call	4 · Kept profit	5 · Full ROI
